COSHH essentials for foundries

This information will help employers (including the self-employed) comply with the Control of Substances Hazardous to Health

Regulations 2002 (COSHH), as amended, to control exposure to metal and casting fume and protect workers' health.

It is also useful for trade union safety representatives.

This sheet describes good practice using general ventilation.

It covers the points you need to follow to reduce exposure to an adequate level.

It is important to follow all the points, or use equally effective measures.

Molten metal fume (foundry fume) is hazardous to health. Ferrous foundry fume can cause lung cancer. Casting fume is irritating to breathe.

This sheet does not apply to aluminium.

Main points

- Keep exposure to fume as low as possible.
- Make sure the controls work.

Fume: General ventilation

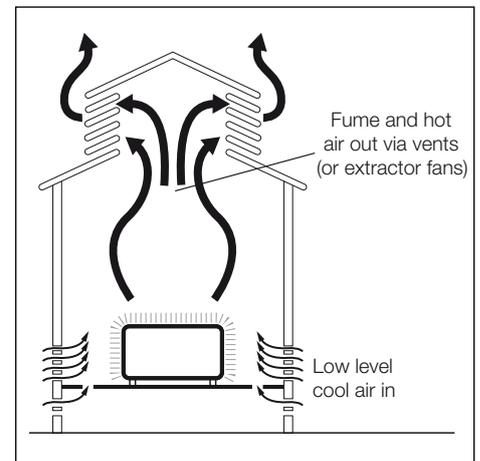

Control approach 1 General ventilation

Access and premises

- ✓ Only allow access to authorised staff.

Equipment

- ✓ Fume is hot and tends to rise.
- ✓ Provide high-level air vents or extraction fans so hot air leaves the building.
- ✓ Provide low-level air inlets. Inlet air may need warming in winter.
- ✓ Ensure the flow of air into and out of the building is not obstructed.
- ✓ Good general ventilation means rapid fume clearance and a through draught.
- ✓ Confirm that any fan extractors are switched on and blades are turning. Consider linking the fan with lighting.
- ✓ If you have an overhead travelling crane, the driver's cabin needs a clean air supply.

Maintenance, examination and testing

- ✓ Follow instructions in maintenance manuals - keep equipment in effective and efficient working order.
- ✓ If extractor fans stop, or are faulty, get them repaired.
- ✓ At least once a week, check visually that the roof vents or extractor fans are clearing the fume properly.
- ✓ Noisy or vibrating fans can indicate a problem.
- ✓ Keep records of all examinations and tests for at least five years.

Personal protective equipment (PPE)

- ✓ Ask your supplier to help you select the right PPE.
- ✓ Respiratory protective equipment (RPE) may be needed for cleaning. If so:
 - Provide RPE with an assigned protection factor (APF) of at least 10. See sheet R2.
 - Disposable RPE is acceptable - throw this away at the end of the task.
 - Otherwise replace RPE filters as recommended by the supplier.

Cleaning and housekeeping

- ✓ Clean general workrooms once a week to stop dust being stirred up.
- ✓ Use a Type H vacuum cleaner fitted with a HEPA filter to clear up dust.

Caution: Don't use a brush or compressed air.

Training and supervision

- ✓ Tell your workers that foundry fume is hazardous to health when breathed in.
- ✓ Working in the right way and using the controls correctly is important for exposure control. Train and supervise workers. See sheet FDO.

- HSE free leaflets can be downloaded from HSE's website: www.hse.gov.uk/pubns.
- For information about health and safety ring HSE's Infoline Tel: 0845 345 0055 Textphone: 0845 408 9577 e-mail: hse.infoline@natbrit.com.
- Contact the British Occupational Hygiene Society (BOHS) on 01332 298101 or at www.bohs.org for lists of qualified hygienists who can help you.

Employee checklist

- If you find any problems, tell your supervisor. Don't just carry on working.
- Use, maintain and store your protective equipment in accordance with instructions.
- Never use solvents to clean your skin.

This guidance is issued by the Health and Safety Executive. Following the guidance is not compulsory and you are free to take other action. But if you do follow the guidance you will normally be doing enough to comply with the law. Health and safety inspectors seek to secure compliance with the law and may refer to this guidance as illustrating good practice.
