Construction Table 2: Management of HAV risks where use of vibrating equipment is unavoidable

Issue	Expectation	Further information (links on HSE website)
Selection of work equipment	Tool selection can make a substantial difference to the vibration level (see Table 1, column 2) but the tool must be suitable for the task and used correctly. Employers should demonstrate a sound procurement policy for power tools and hand-guided machines, showing they have considered the following: There is no reasonably practicable alternative method with no (or less) vibration exposure (see Table 1) Equipment is generally suitable for the job (safety, size, power, efficiency, ergonomics, cost, user acceptability, etc.) Reduced vibration designs are selected provided the tools are otherwise suitable (e.g. breakers with handle suspension Declared vibration emission is not high compared with competing machines of similar capacity to do the job Information on likely vibration emission in use (e.g. from manufacturer, hire company, databases) Available information from the manufacturer on control of vibration risks through recommendations for: maintenance (e.g. sharpening chisels) selection of consumables (chisels, drills, abrasive discs, etc.) correct operation and operator training (see below) maximum daily trigger times or maximum daily work done with the tool	Selecting equipment Employers' leaflet on HAV
Limiting daily exposure time	Restricting the exposure time ("finger-on-trigger" time) may be required to bring exposures below the ELV, even after all reasonably practicable measures to reduce vibration levels are in place. Maximum times can be determined using the exposure points system or supplier's "traffic lights" tool categories, but these should be derived from sound "real use" vibration emission values. Note: Employers tend to ask "How long can we use this tool?" The exposure must be reduced to the lowest level that is reasonably practicable (Reg 6(2)), so the ELV should not be used as a target, if a lower exposure is reasonably practicable.	Reduce the period of exposure Exposure points system and ready reckoner
Other risk controls	Control of HAVS risk by means other than reducing vibration exposure: • Ergonomic aids to support weight of tool and reduce the grip and other forces applied by the operator • Suitable workplace temperature or provision of appropriate warm clothing and gloves • Regular breaks from work involving vibration and encourage operators to exercise fingers	Gloves and warm clothing Other measures Employees' leaflet on HAV

Issue	Expectation	Further information (links on HSE website)
Information,	Employees at risk from vibration should have received information on:	Employees' leaflet on HAV
instruction	the risks from HAV and how to help reduce them	. ,
and training	arrangements for health surveillance and their duty to cooperate.	Information and training
	Look for evidence that tools are being used correctly, as recommended by the manufacturer. This may require operators to receive specified training: are the operators and their supervisors aware of the need? In particular, breakers with suspended (sprung) handles must be used correctly, and with appropriate downward force, or the potential reduction in vibration (e.g. from 20 to 5 m/s²) will not be achieved.	Example: training provided by breaker manufacturer
Health	Required where the EAV is likely to be exceeded. Expect to see, as a minimum:	Employers' leaflet on HAV
surveillance	 use of a periodic health screening questionnaire – ideally annually and for new employees 	
	 arrangements for referral of relevant cases to an occupational health provider with HAVS expertise for diagnosis and on-going monitoring 	Health surveillance guidance
	arrangements to receive medical advice on management of affected employees	
	arrangements for RIDDOR reporting of HAVS cases	
	 arrangements to receive anonymised information to demonstrate effectiveness of controls (although this may not be meaningful for casual/short-term workers) 	
	In construction, short-term employment presents difficulties for managing health surveillance; cooperation between employers should be encouraged.	

PLEASE FAX COMPLETED FORM TO: 020 7717 6681 Management of HAV risks for Construction – Feedback Form

Your views are important to us so that we can improve the way we communicate information on managing the risks from hand arm vibration. We would be grateful if you could spare a couple of minutes to fill in this form and fax it back to us at the above number. Any information you provide will be treated in confidence and will only be used for research purposes. You do not have to give your contact details.

Please rate the following statements by ticking the box which most closely represents your level of agreement or disagreement with each statement.

The issues listed covered those that I was concerned with The information given was useful in helping my organisation decide whether it should be taking action I was able to understand the information on Management of HAV risk I think the references/related guidance given are useful I think the information given in this table is sufficient for my purposes My organisation intends to take action to meet the risk management expectations listed here If you have any comments you would like to make, please do so in the space below: About you: Please tick the primary business of your organisation Foundries Construction Manufacturing Quarry/masonry Agriculture/forestry Engineering supplier Other Please specify What is your role/job in your organisation?
